A Shared Design for Research and Evidence

Typography, emphasis, and reusable elements

Typography and Emphasis

Typography and Semantic Sizes

Ordinary body text uses the current Source Serif family. Proportional old-style numerals: 0123456789.

- Regular, **bold**, *italic*, and ***bold italic***.
- **Blue bold emphasis** and coral alert text are distinct.
  - Nested text follows the class-relative size hierarchy.

[Smith (2020)] ▸ Buttons and links

Nested Lists and Overlays

- First-level dot-circle; text and marker use relative list layout.
  - Second-level solid long arrow in a fixed-width icon box.
    - The existing third-level marker is preserved.

Nested Lists and Overlays

- First-level dot-circle; text and marker use relative list layout.
  - Second-level solid long arrow in a fixed-width icon box.
    - The existing third-level marker is preserved.
- Spacing and grouping survive the nested environment.

Numbered Lists and Optional Labels

a) Custom alphabetic labels remain blue.
    i) Nested numbering and overlay defaults are accepted.

    ii) The extra spacing is applied once.

Numbered Lists and Optional Labels

a) Custom alphabetic labels remain blue.
    i) Nested numbering and overlay defaults are accepted.
    ii) The extra spacing is applied once.
b) The outer counter continues after the nested list.

Reusable Callouts

Shared Emphasis and Callout Helpers

Research question: Can one shared preamble preserve a clear visual hierarchy across presentations?

- **Reusable emphasis:** blue, bold serif text.
- Alerts: coral, with surrounding text staying black.
- The callout retains its grey fill and rounded orange border.

Starred Section Behaviour

This frame follows a starred section directly. No automatic divider is inserted for the starred section.

Theorems and Equations

A Numbered Proposition with an Optional Name

Proposition 1 (An illustrative identity)

For every real number x, the following identity holds:

$$(x+1)^2 = x^2 + 2x + 1. \tag{1}$$

Plain-style theorem prose is italic; the heading is blue and numbered.

Proof.

Expand the product $(x+1)(x+1)$. □

Theorem Counters and Compatibility Aliases

Theorem 1 (First named result)

The native theorem counter remains available.

Lemma 2 (A compatible alias)

Existing aliases retain optional names and their underlying counters.

Proposition 2 (Second proposition)

Proposition numbering advances automatically.

Definition and Example Semantics

Definition 3 (A reusable design)

A shared style supplies presentation-wide formatting.

Example 4 (Upright example prose)

Definitions and examples retain their normal theorem-style semantics.

Assumption 1

Assumptions retain plain-style italic prose.

References and Captions

Citation Names, Colours, and Local Grouping

Ordinary author–year links: Smith (2020) and Smith (2021).

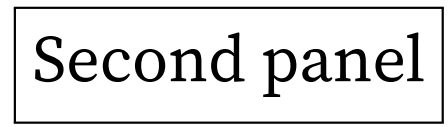

- Reduced grey citation: [Smith (2020)] .
- Ordinary links return to magenta: (Smith, 2021).
- Three authors are shortened: Adams et al. (2022).
- Author and year commands: Smith, (2020).

Surnames stay compact even when authors share a surname.

Numbered Figures and Subcaptions

(a) First descriptive panel caption.

(b) Second descriptive panel caption.

Figure 1: A deliberately long figure caption that wraps naturally within its containing width while keeping its numbered label blue and its descriptive text black.

Booktabs Table with a Numbered Caption

Table 1: An illustrative table with automatic numbering.

Group	Baseline	Alternative
Primary	12.3	14.5
Secondary	23.4	25.6
Tertiary	34.5	36.7

Table text retains the ordinary class-relative body size.

Buttons and Hyperlinks

Appendix details Return-style button

- Buttons have white fill, blue text/borders, and tiny monospace labels.
- External URL: example.org.
- Local reference: equation (1).
- Figure 1 and table 1 use automatic counters.

Existing Code Listing Support

```
% An illustrative Matlab calculation
x = ones(2, 1);
y = factorial(3) * x;
```

Listing colours and monospace behaviour retain their existing settings.

Appendix

Appendix and Return Navigation

Appendix-numbering support remains active with no visible slide numbers.

$$\mathbb{E}[X] = \int_{\mathbb{R}} x f(x)\,\mathrm{d}x. \tag{2}$$
